1998 - 1999 OPEN WATER FISHING REGULATIONS

Each biennial revision of this publication is filed with the Secretary of State and, as a result, the rules herein have the force of law as printed.

"There is established the Maine Department of Inland Fisheries and Wildlife to preserve, protect and enhance the inland fisheries and wildlife resources of the State; to encourage the wise use of these resources; to ensure coordinated planning for the future use and preservation of these resources; and to provide for effective management of these resources".
(MRSA, Title 12, §7011)

The inland waters of Maine are a natural treasure, providing a diverse and exciting fishing experience that is a precious part of Maine's outdoor heritage. The Department has developed the regulations in this booklet to protect fisheries and to provide you with a diversity of fishing opportunities now and in the future. In

setting these regulations we consider your wishes and the welfare of our fisheries, as well as the unique ability of each of our inland waters to produce different numbers and sizes of fish. Whether you are a seasoned angler or a beginner, I urge you to become familiar with the general fishing laws of Maine and the many special regulations this booklet contains. When you reach your favorite fishing spot, I invite you to respect private property and practice good sportsmanship and ethical behavior as you enjoy the opportunities afforded to you as a Maine license holder.

A handwritten signature in dark ink, appearing to read "Lee Perry", is written over a horizontal line.

Lee Perry, Commissioner

FISH CONSUMPTION ADVISORY

Statewide Fish Consumption Advisory for ALL Inland Waters Due to Mercury Contamination

Mercury is present in fish caught in all inland waters. Mercury is toxic to the nervous system. The unborn fetus and young children are especially sensitive to the toxic effects of mercury because they have actively developing nervous systems. For this reason, one consumption advisory is issued to protect the unborn fetus and young children. A less restrictive advisory is issued for all other individuals (the general population). For both groups, separate advisories are issued regarding warm water fish (e.g., bass, pickerel, perch, sunfish, crappie) versus cold water fish (e.g., trout, salmon, smelt, cusk). Warm water species tend to have higher levels of mercury in fish tissue than cold water species.

- *Pregnant women, nursing mothers, women who plan to become pregnant, and children less than 8 years of age* should NOT EAT warm water fish species caught in any of Maine's inland surface waters; consumption of cold water fish species should be limited to 1 meal per month.
- *All other individuals* should limit consumption of warm water species caught in Maine's inland waters to 2 to 3 meals per month. There are no limits for consumption of cold water species for the general population.

Specific Water Body Consumption Advisories

PCBs and Dioxins (chemicals capable of causing cancer, reproductive and other toxic effects) have been found in fish caught in specific waters of the State in amounts warranting consumption advisories. The following advisories are directed to the *general population*. (Pregnant women, nursing mothers, women who plan to become pregnant, and young children are cautioned to pay close attention to the usually more stringent mercury advisory).

- **Do not consume any freshwater fish from the following waters:** Kennebec River (Edwards Dam, Augusta to The Chops, Bath); Little Madawaska River and all tributaries (Madawaska Dam, Caribou to Grimes Road, Caribou); Green Pond and Chapman Pit (Limestone).
- **Consume no more than 6 to 12 meals* per year of any freshwater fish caught in the following waters:** Androscoggin River (Gilead to Merrymeeting Bay); Salmon Falls River (below Berwick), Red Brook (Scarborough).
- **Consume no more than 12 to 24 meals* per year of any freshwater fish caught in the following waters:** Penobscot River (Mattaseunk Dam, Mattawamkeag to Bangor); Sebasticook River (Hartland to confluence with Kennebec River in Winslow); East Branch Sebasticook River (below Corinna to confluence with main stem Sebasticook River).

*People who tend to consume larger (older) fish are advised to use the lower limit when a range is given for # of meals per year; older fish accumulate more PCBs and dioxins. A fish meal is one 8-ounce serving.

NOTE: The Specific Water Body Advisories above are based on 1995 sampling data. These advisories may be revised as new sampling data become available. For more information about current advisories or any revisions, contact the Maine Bureau of Health Environmental Toxicology Program at (207) 287-6455.

How to Use This Book

The first thing you should do is look for the body of water you plan to fish under the appropriate county. (Look for specific county regulations under the heading). If it is **NOT** listed, go back to the front of the book (General Law on page 4-5) for the season dates, bag limits, length limits, etc. that apply.

If the water **IS** listed, it will be followed by any special regulations that apply. These special regulations may be in addition to, or in place of, general law provisions, i.e., the special regulation may be a shorter length limit on salmon only and all other provisions of the General Law would apply.

In most cases, you will first have to check for special regulations and then go back to General Law.

We have tried to make it easier to find the special regulations by placing a fold-out tab in the back of the book with all of the S-codes (special regulations) listed so that no matter what page you are on in the book, you can flip the back page open and see all of the S-codes.

If you have questions about any of the regulations in this book or how to use it, please contact any of the Department's regional offices or the main office in Augusta. Telephone numbers are listed on inside back page.

TIPS FOR CATCHING & RELEASING FISH

By carefully following these simple instructions, you can release your fish unharmed.

One good way to aid you in releasing your fish quickly is to use barbless hooks in the first place – or bend the barbs over as shown – or simply file them off!

1. **Time is of the essence.** Play and release the fish as quickly and carefully as possible. An exhausted fish may be too weak to recover.
2. **Keep the fish in the water** as much as you can. A fish out of water is suffocating, and may injure itself on rocks, etc. Try not to keep the fish out of water for more than 15 seconds.
3. **Be gentle.** Wet your hands before handling any live fish. Keep your fingers away from the gills. Don't squeeze the fish. Small fish may be held gently around the middle; let them swim away once they've recovered. Larger fish may be held securely by the tail and bottom jaw. If a net is used, make sure it is fine-meshed to avoid injuries to the gills or eyes.
4. **Remove the hook with small pliers** or use thumb and forefinger to gently shake it loose. If the hook cannot be easily removed, cut the leader. A regular steel hook will rust out fairly quickly. Do not use stainless or gold-plated hooks.
5. **To revive a fish** once it is back in the water, hold it in a swimming position in the water and move it gently back and forth until it is able to swim away.
6. Lake trout (togue) often have expanded air bladders after being pulled up rapidly from deep water. If the belly appears expanded, release the fish from the hook first, then gently press your thumb along the stomach near the paired belly fins and move it forward a few times to remove air from the bladder. Finally, proceed to revive and free the fish (see Step 5).

"If you enjoyed catching your fish, so will the next angler!"

Waters with Special Rules are listed in this booklet under county headings. This map is included only to show county lines and is not intended to be a detailed map. Please consult an atlas or map for more specific locations.

Kennebec & Androscoggin Rivers

Fishing enthusiasts, recreationalists and others seeking water release information for selected dams on the upper Androscoggin and Kennebec river basins can now receive it via a toll-free number 24-hours a day.

Central Maine Power Company and its subsidiary, Union Water Power, have launched a new public service "The H₂O Flow Hotline", which provides daily information on water releases from 11 dams on the Kennebec and Androscoggin watersheds. Interested parties can call 1-800-557-FLOW from any touch-tone phone and follow the pre-recorded prompts. Information on releases from the following dams is available:

- Harris, Flagstaff, Williams, East and West Outlets, Brassua, and Roach Dams on the Kennebec watershed;
- Aziscohos, Errol, and Middle and Upper Dams on the Androscoggin watershed.

The recording is updated each evening at 6:00 p.m. with information for the following day and at 9:00 a.m. for the current day, however, the flows provided are considered estimates and can change at any time. CMP and UWP urge people who fish and paddle below dams to exercise extreme caution, as water levels can rise or fall rapidly without notice.

IDENTIFICATION OF SALMON and BROWN TROUT

The most obvious differences between salmon and brown trout may be found in the "head and tail" areas. Knowing them may help the angler release a fish more quickly when certain creel and size restrictions apply.

Salmon: the vomerine teeth are small and arranged in single row on shaft, few to none on vomerine head.

Brown trout: the vomerine teeth are well-developed on both vomerine head and shaft, arranged in a zig-zag row on shaft.

The caudal fin on salmon may be slightly forked; on brown trout, the caudal fin is square and unforked.

LOONS AND LEAD DON'T MIX

Lead tackle is deadly to waterbirds!

Lead sinkers & jigs cause fatal lead poisoning in loons and other waterfowl.

Lead ingestion is the #1 killer
of loons in Maine!

YOU CAN:

Use steel, tin, bismuth or plastic instead

Ask local tackle shops to stock alternatives

Properly dispose of old lead sinkers & jigs

Give A Sporting Chance ... AND preserve landowner relations!

A Maine **Supersport** contribution is a great way for people who enjoy hunting and fishing to show support for those who manage and protect our fish and wildlife resources. And the **Supersport** is now available to licensed anglers as well as licensed hunters.

Most outdoor recreation in Maine depends on access to privately owned land. This key to our outdoor heritage must be preserved by maintaining relationships between those who own the land and those who use it. When you buy your sporting license, the additional \$15 you contribute as a **Supersport** will help support landowner relations programs to ensure a future of sporting recreation.

As a thank you, several businesses that strongly support the Landowner Relations Program, are offering the following items to all **Supersport** license buyers.

1. Points North Outfitters, Winthrop - 10% Discount (for most items in store) some limitations will apply, such as firearms, see store personnel for details.
2. Kittery Trading Post, Kittery - Gift Certificate
3. Van Raymonds Outfitters, Bangor - Gift Certificate
4. Maine's Northwoods Sporting Journal, West Enfield - 1 year subscription
5. North Maine Woods Land Management Co., Ashland - Gift Certificate toward gate fees.
6. Maine Dept. of Inland Fisheries & Wildlife - Window Decal and Wildlife Report

Ask about the **Supersport** contribution when you buy your license. Maine residents can buy one wherever licenses are sold, including many sporting outlets across the state.

Nonresident hunters and anglers may obtain a **Supersport** license at these outlets as well, or through the mail from:

Maine Department of Inland Fisheries and Wildlife
Licensing Division
284 State Street, 41 State House Station
Augusta, ME 04333-0041

The Maine
